- BoozeLee/go-ai-coder: Local coding agent support tier
- BoozeLee/codeqai: Local code-search pro features

5. Fourteen-day cleanup checklist

1. Archive or delete migration stubs and myproduct/Test placeholders.
2. Strip unverified \$X/month claims from READMEs and descriptions (or wire a real checkout).
3. Rewrite descriptions for keepers: problem, who it's for, install command.
4. Add LICENSE + topics to every keeper; delete empty repos.
5. Point dead homepages at GitHub READMEs; fix DNS or remove links.
6. Pin 3 keepers on the profile README; move the rest under an org archive.
7. Re-run `graveyard scan --owner ...` and diff CSV week-over-week.

6. Sample inventory (top 40 by stars, then name)

Methodology: GitHub GraphQL/REST public API · description regex for price/humanitarian/migration smells · homepage HTTP status probe · keeper allowlist + star/homepage rules. Full row-level CSV ships with purchase.

Limitations: Not a revenue audit. Not legal advice. Medical/regulated repos are flagged do-not-monetize only.
